

Practical Applications of Public Health Risk Assessment

Katherine Walker, ScD
Health Effects Institute

Goals for this lecture

- Learn about existing resources from international organizations, national occupational and environmental institutes that can be used to help physicians, scientists, and public health officials protect workers and the general population from reproductive hazards
- Review and understand how the tools of risk assessment can be applied to different problems:
 - Evaluation of exposures to potential hazards in the workplace
 - Evaluation of exposures of the general population to potential hazards
 - Setting priorities for public health protection using Regional, and National Burden of Disease Estimation
